Jan 9, 2025

1- Mikael Barbero- SBOM - Software bill of materials:
https://eclipse-csi.github.io/security-handbook/sbom/index.html

https://docs.google.com/presentation/d/12oEuHSUappENnDtZ2tXcD0_wh1nCx8NaFiD9YG89AaI/edit?usp=share_link

Primary goal: enable timely responses for vuln incidents.

Secondary goal: offer projects ability to documents their non-vulnerability.

Working w/ Wayne to align dash and SBOM.

* Document and promote best practices

* Support early adopters
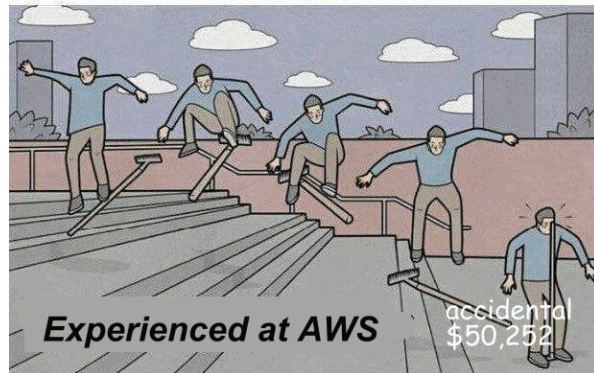

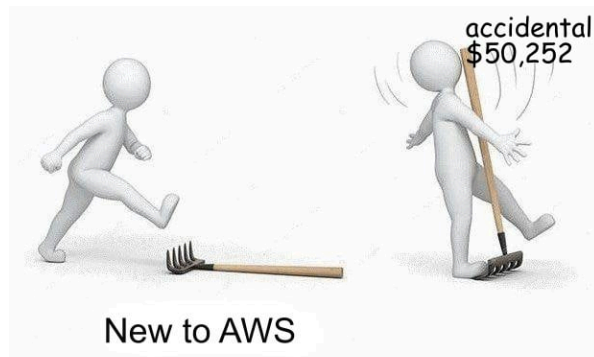

* Establishing sbom registry

2- Minutes for dec 12 approved

3- TypeFox has the OpenCollab server.

 Eclipse takes over cloud account and funding, Dev and Ops handled by the working group. This is a new model that would help for new projects.

Gitlab issue. https://gitlab.eclipse.org/eclipsefdn/helpdesk/-/issues/5243

Things will start slow, typefox will ramp up efforts in Q2.

Kostiantyn fears this:

The code so far is low reqs, as it's just a "matchmaker".

Request: JavaOne and JavaLand: Should we sponsor it? Can we take advantage of the foundation to go to important trade shows?

- Kostiantyn : We need to distance ourselves from Eclipse / Java for branding reasons.
- Tim: What are all the conferences that the project would like to go to? Maybe sponsor where we go and re-enforce our presence. Che/JKube may have interest w/ Eclipsecon. MAYBE JavaOne
- John: Let's do a slack to discuss conferences. Top places: Regulatory Compliance, SDV and AI.

Marketing Academic

- Miro: Concerned by paywalls.
- John: Let's look at a specific example.
- Miro: Increasing the reach of academic work is good. Limits to what can be done w/ Papers. Technical reports are another issue.
- Mitigated yes: look for an example.
