

**Feb 6, 2025**

**Tony and Ammar** introduce themselves. Tony worked on debugging in the past and now profiling. Ammar is also currently working in the profiling area and using Trace Compass tools. Located in Austin, Texas.

### **Open Invention Network - Frederic Desbiens**

Open Invention Network a standalone organization.  
Protection for patent and open source component registration.  
Stepping up efforts to defend the open source software.

If the tools can run on Linux then they can be included in the list.  
Packages submitted are checked by the legal team to see if they can be included.  
Updated every 18-24 months. Table 13 (revision 13) is closing fast.

Eclipse Theia or Che could be added to the list.  
Companies can also consider joining the OIN.

Jonas: Any argument for submitting all projects in the working group?

Frederic: We do not want to flood the OIN with all the Eclipse projects.

Jonas: There are about 7 strategic projects the working group members are using.

Frederic: Then perhaps all 7 makes sense for the Eclipse Cloud Tools Group.

Action: Should have a discussion asynchronously in the meantime. John Kellerman will write a message to the mailing list to start the discussion with projects. Hard deadline is mid-February.  
<https://docs.google.com/presentation/d/1Xn7RrPGbzSWmHIDC9LFoOIFjxVLLrdJBSSpayvMRxgs>

The specific version of the software needs to be mentioned.

### **Steps forward for OpenCollab Server**

- <https://gitlab.eclipse.org/eclipsefdn/helpdesk/-/issues/5243>

Eclipse Foundation will be funding it.

However the working group will need to run it.

Miro will take another look at this next quarter.

Some work is ongoing such as updating the website to show the new governance.

Need some clarity before taking steps with deployment, committer access lists and so on.

Some concern over mistakes causing a large cloud bill. Technical measures on the cloud side should avoid this. Tricky when committers could have access to cause errors and high costs.

Transfer will happen soon, we hope.

## **Modernization Strategic IG**

Not only part of one working group. Joint venture between the Cloud Tools WG and IDE WG.  
Focus of this is toolchain modernization.

<https://projects.eclipse.org/interest-groups/toolchain-modernization-strategy-interest-group>

People looking at existing toolchains and deciding what to do next.

Not a migration working group - instead looking at modernization. A way to modernize existing tools built on legacy/older software or look to different web-based technology stacks.

IDE WG is also doing some modernization work in their activity.

Free to join if you are an existing Eclipse member. It is an interest group rather than a working group.

<https://www.eclipse.org/collaborations/interest-groups/#3-what-are-the-major-differences-between-interest-groups-and-working-groups-how-do-i-choose-which-is-right-for-my-initiative>

The IG is at the crossroads between the 2 existing working groups.

Tim mentions AI tooling to help migration from one technology to another. This is included in the IG remit.

Subscribe the mailing list and you are in the gang.

## **Welcome Tony and Ammar (AMD buddies)**

Facing issues with Trace Compass and Theia integrations in the future.

Tony: Visualization of traces and telemetry

Collecting knowledge to help facilitate transition to Eclipse Cloud Tools projects.

## **AOB**

John Kellerman is leaving the working groups and Thomas Froment will be taking over from John.

Both the Eclipse Cloud Tools WG and Open VSX WG.

Everyone offers their thanks for the hard work and contributions.
