Mar 6, 2025

We have quorum.

Minutes from Feb 6, 2025 are approved.

Juan gives us a brief overview of the [Open Regulatory Compliance Working Group](#): the [Cyber Resilience Act](#) is a major focus.

Juan gives us a brief overview of the [Oniro Working Group](#): adaptation and integration of Open Harmony (Chinese open source project at [OpenAtom Foundation](#)) for the European market.

Thomas takes the Program Manager role from John. Thomas shows us his workflow for translating the Eclipse IDE program plan into epics on the respective GitLab project.

Question: is it ok if Thomas uses the same approach for the Cloud DevTools WG?

- No objections. Thomas will give us access to a GitLab project.

Matthew says a new working group about Strategic AI is in the making, but there's nothing official yet. There is overlap with our projects, specifically Theia AI and Open Collaboration Tools.

As already voted on last year, the Contributor Award Q1/25 goes to EclipseSource for Theia AI.

Thomas is starting to look into opportunities for outreach. Supporting local meetups could be good, maybe with remote presentations – e.g. in India. Being located in Europe, Thomas can visit events in this area more easily (compared to John earlier).

Jonas announces a press release about Theia AI next Thursday.
